PROFILE SUMMARY

Passionate Java full-stack developer with 2 years of experience specializing in building robust frameworks. Proficient in Java, JavaScript, Python and PL/SQL, adept at crafting scalable solutions to meet complex business needs. Committed to continuous learning and innovation.

TECHNICAL SKILLS

Programming:

C/C++, Java, Python, Rust

Web & App Development:

HTML, CSS, Javascript, React, Next.js, React Native, Node.js

Databases & Servers:

SQL, Mongo, Weblogic, Express

DevOps Tools:

Docker, Kubernetes, Jenkins, Git, Oracle Cloud

Soft Skills:

Efficient Communicator, Leader, Public Speaker

EDUCATION

National Institute of Technology

2018 - 2022

B.Tech in Computer Science

CGPA: 9.13 / 10

SVA International School

2015 - 2017

Class XII

Percentage: 91%

BKD Aldrich Public School

2013 - 2015

Class X

CGPA: 9.6 / 10

WORK EXPERIENCE

ORACLE

Software Engineer 2

Aug 2024-Present

- Designed & Developed a solution for integrating a reporting application into the main hospitality system, leveraging the core application's UI framework for reports and the reporting app's report generation server.
- This integration ensured a seamless user experience while reducing the load on the core application.

ORACLE

Software Engineer

July 2022-Aug 2024

- Developed Import Data framework, focusing on implementing chunking techniques and a robust uploading mechanism to handle large file uploads within the application efficiently.
- Develop various Customer Relationship Management features involving memberships, profiles and stays.

ORACLE

SDE Intern

Jan 2022-Jun 2022

- Developed membership features for the hospitality app.
- Explored software architecture of existing hospitality applications along with tools and technologies involved.
- Explored existing frameworks which are involved in building hospitality applications.

PROJECTS

Legal Documents Summarization & Classification Deep Learning

- Build deep learning model for classification & summarization so that using them we can build searching functionality and analysis of documents in huge storage.
- This work got published in FIRE 2021-CEUR and MISP Raipur proceedings.

Decentralized Verification of News Articles

Blockchain

- Implemented a secure and tamper-proof record-keeping system on the blockchain to ensure data integrity.
- Leveraged Python and advanced NLP techniques to analyze data content and identify patterns indicative of fake news.
- Enabled transparent verification of news articles by providing users with auditor access to the blockchain.
